Purpose and procedure .......................... 2

Additional articles abstracted in ACP Journal Club ................................................. 3

EBM Notebook
Practice Corner: Taking evidence in hand ................................................................. 4

Resource review ................................................. 7

Therapeutics
Magnesium sulphate prevented eclampsia in women with pre-eclampsia ......................... 9
Simvastatin reduced mortality and vascular events ......................................................... 10
Antioxidant vitamins did not reduce death, vascular events, or cancer in high risk patients ......................................................... 11
Oestrogen plus progesterin was not effective for long term secondary prevention of coronary heart disease in postmenopausal women ......................................................................................... 12
Long term oestrogen plus progesterin increased venous thromboembolism and biliary tract surgery in postmenopausal women ......................................................................................... 13
Self management with the Angina Plan reduced anxiety, depression, angina attacks, and use of medication ......................................................... 14
Review: ß blockers increase fatigue and sexual dysfunction but not depression after myocardial infarction ......................................................................................... 15
Coumadin alone or aspirin plus coumadin reduced coronary events and death after acute myocardial infarction or unstable angina......................................................................................... 16
Involving patients with type 2 diabetes, hypertension, and hyperlipidaemia in disease management improved outcomes ......................................................................................... 17
Review: primary prevention strategies do not improve contraceptive use or reduce pregnancies in adolescents ......................................................................................... 18
Lansoprazole reduced recurrence of ulcer complications in long term use of low dose aspirin ......................................................................................... 19
Noninvasive Helicobacter pylori testing was as effective as endoscopy for managing dyspepsia ......................................................................................... 20

Helicobacter pylori eradication improved dyspepsia symptoms ............................................. 21
Risperidone was safe and effective for short term treatment of children with autism and serious behavioural disturbances ......................................................................................... 22
Cognitive behavioural therapy delivered by nurses improved insight and overall symptomatology in schizophrenia ......................................................................................... 23
Treatment of scalp lacerations with a hair apposition technique reduced scarring, pain, and procedure duration compared with suturing ......................................................................................... 24
Tonsillectomy and adenotonsillectomy showed modest benefits in children moderately affected with recurrent throat infection ......................................................................................... 25

Diagnosis
Various history and physical examination characteristics predicted nerve root compression ......................................................................................... 26
Review: specific combinations of symptoms effectively rule in the diagnosis of urinary tract infection based on history alone ......................................................................................... 27
B type natriuretic peptide levels had high sensitivity but moderate specificity for detecting CHF in the emergency department ......................................................................................... 28
Review: ELISA D-dimer is sensitive but not specific in diagnosing pulmonary embolism in an ambulatory clinical setting ......................................................................................... 29

Prognosis
Review: 1 in 8 preschool children develop ≥ 1 complication after presenting to primary care with acute cough ......................................................................................... 30
Functional neurological deficit but not epilepsy alone increased the risk of death in childhood epilepsy ......................................................................................... 31

Economics
Review: the cost-effectiveness of interventions for HIV/AIDS in Africa varies greatly ......................................................................................... 32
