

Evidence-Based Nursing (EBN) is looking for commentators and we would like you to consider becoming one.

EBN is an international digest that surveys a wide range of international health related journals. The clinical relevance and rigour of the studies is assessed to identify research that is relevant to nursing. Key details of these studies are included in a succinct, informative expert commentary which details the clinical application of the findings as well as implications for research.

The digest is designed to alert practising nurses to important and clinically relevant advances relevant to care. The journal is published by the BMJ Publishing Group and the Royal College of Nursing Publishing Company.

As a commentator you will be asked to write a commentary on a research paper discussing the following:

1. The context of the problem addressed by the paper (epidemiology, history)
2. A brief description and critique of the methods, results & conclusions
3. The clinical & nursing implications for practice
4. How the results fit in with what is currently known in the field

Reasons why you should become a commentator:

- Commentaries are indexed in PubMed/Medline and with over 20 million citations, this is a crucial place for your work to be seen
- Published online at ebn.bmj.com and in print you will reach thousands of active professionals

Become a commentator and enjoy:

- ScholarOne Manuscripts – an easy to use online submissions system where you can track your commentary through the peer review process
- Copyright retention – BMJ Journals has liberal re-use rights for all authors
- Post publication data – share your published article with colleagues, and monitor how many times it has been downloaded

Should you wish to become a commentator or have any questions, then please contact our Editorial team as soon as possible at info.ebn@bmjgroup.com

If you are unable to participate, we would be grateful if you could suggest an alternative expert who might be interested in providing a commentary (and their contact details if you have them) or alternatively forward this email to them.

Thank you for your time.
