

Evidence-Based Medicine

Contents

Perspective

- 121** The statin diabetes conundrum: short-term gain, long-term risk or inconvenient truth?

Therapeutics/Prevention

- 124** Cannabinoids fail to show evidence of slowing down the progression of multiple sclerosis

- 125** Sugar and warmth additively decrease pain in newborns getting vaccines

- 126** *Staphylococcus aureus* bacteraemia management: where do we stand and where are we going?

- 127** In women with gestational diabetes requiring drug treatment, glibenclamide may be inferior to insulin and metformin: metformin (plus insulin when required) performs better than insulin

- 128** Four-month fluoroquinolone-containing regimens are inferior to standard 6-month tuberculosis treatment

- 130** Cytisine is more effective than nicotine replacement for smoking cessation

- 131** High-dose barium impaction therapy is a practical option for reducing recurrence of colonic diverticular bleeding

- 132** Long-term ticagrelor therapy in patients with prior myocardial infarction significantly reduces ischaemic events, albeit with increased bleeding

- 133** Varenicline can help smokers to stop smoking by gradual reduction

- 134** E-cigarettes may help smokers stop or reduce smoking

- 135** Long term impact of screening for type 2 diabetes mellitus – a commentary on new evidence

- 136** Type 2 diabetes mellitus screening has no effect on mortality

- 137** Cranberry capsules (2 taken twice daily for an average 38 days) reduce the risk of postoperative urinary tract infection in women undergoing benign gynaecological surgery involving intraoperative catheterisation

- 138** Oral steroids for improved function but not pain in acute radiculopathy due to disc herniation

- 139** Delivering a decision support intervention about PSA screening to patients outside of clinical encounters is ineffective in promoting informed decision-making

August 2015 Volume 20 No 4

- 140** Trimethoprim-sulfamethoxazole monotherapy should not be used for treatment of severe methicillin-resistant *Staphylococcus aureus* infections

- 141** Lowering diastolic blood pressure in non-proteinuric hypertension in pregnancy is not harmful to the fetus and is associated with reduced frequency of severe maternal hypertension

- 142** Coronary artery bypass surgery continues to remain the treatment of choice for multivessel coronary artery disease even in the era of new-generation drug-eluting stents

- 143** Physical activity may improve measures of cognition in children

Diagnosis

- 144** Highly-sensitive troponin T algorithm facilitates early discharge of low-risk chest pain patients within 1 h of emergency department arrival

- 145** Anatomic and functional testing for coronary artery disease in symptomatic patients yield similar cardiovascular outcomes

- 146** High-sensitivity cardiac troponin T in isolation has limited diagnostic utility in identifying cardiac causes of syncope

Prognosis

- 147** Low back pain has a poor prognosis for recovery among seniors

- 148** Bariatric surgery is associated with improved long-term survival in severely obese US veterans

Quality improvement

- 149** The mortality rate in England between 2007 and 2012 was not associated with the quality of primary care in an established pay for performance programme

Economic analysis

- 150** Potential cost-savings may be considerable with management of hypertension according to updated US hypertension guidelines, but for women aged 35–44 years these benefits are unlikely

Corrections

- 123, 133** Corrections
