</table>
Angiography
Duplex Doppler ultrasonography was accurate in determining 60% or greater carotid artery stenosis, 122

Angioplasty, transluminal, percutaneous coronary
CABG leads to less angina and less reintervention than PTCA, but mortality and subsequent MI are the same, 84
CABG led to less angina, reintervention, and medication than did PTCA, but mortality did not differ, 83
Stent implantation reduced repeat angioplasty at 1 year in patients with stable angina, 137

Antibiotics
Meta-analysis: Antibiotics at the time of a therapeutic abortion protect against upper genital tract infections, 218
Noninvasive management strategies were more cost-effective in suspected peptic ulcer disease, 62

Anticoagulants
Fewer venous thromboembolism recurrences occurred with 6 months than with 6 weeks of anticoagulant therapy, 42

Anticonvulsants
Anticonvulsant drugs reduce pain in trigeminal neuralgia and diabetic neuropathy and are effective for migraine prophylaxis, 89

Antidepressants
Antidepressant drugs relieve symptoms of obsessive-compulsive disorder, 82

Antidepressant agents, tricyclic
Review: SSRIs are as effective as tricyclics and have fewer side effects, but their cost-effectiveness has not been established, 201
Tricyclic drugs are no more effective than placebo in treating depression in children and adolescents, 47

Antihyperensive agents
Antihyperensive agents affect serum lipid levels, 29
Antihyperensive drugs decrease mortality, coronary events, and stroke in elderly persons, 105

Antioxidants
Vitamins E and C and β-carotene may not reduce cardiovascular mortality, 86

Anxiety
Antidepressant drugs relieve symptoms of obsessive-compulsive disorder, 82

Apger score
Meta-analysis: Amniotomy does not reduce the rate of caesarean section, 174

Appendectomy
Laparoscopy caused longer operating times and shorter hospital stays than did open appendectomy, 79

Arrhythmia
Event recorders provided better data and were more cost-effective than 48-hour Holter monitoring in detecting arrhythmias, 159

Ascites
Trimethoprim–sulfamethoxazole reduced bacterial peritonitis occurrence in cirrhosis, 20

Aspirin
Streptokinase led to higher 10-day and 6-month case fatality rates in acute stroke, 108

Warfarin was cost-effective for stroke prophylaxis in nonvalvular atrial fibrillation with additional risk factors, 128

Asthma
A metered-dose inhaler with a spacer was more effective than a nebuliser in children with acute asthma, 14

Practice guidelines improved reporting of patient variables, 127

Auscultation
Routine intrapartum electronic fetal monitoring decreases neonatal seizures but increases operative deliveries, 93

Azithromycin
Azithromycin was cost-effective for genital Chlamydia trachomatis infections, 160

Bandages
Ardeparin plus graduated compression stockings prevented DVT after knee surgery, 213
Subcutaneous heparin plus pneumatic compression stockings prevented pulmonary embolism after cardiac surgery, 120

Bed rest
Ordinary activity was best for acute low-back pain, 21

Beer
Inverse association between alcohol intake and risk for ischemic heart disease depended on the LDL cholesterol level, 189
Review: Modest alcohol consumption lowers risk for coronary heart disease irrespective of the type of drink, 188

Behavior change
Interventions improve primary care processes but not necessarily outcomes, 61
Systematic practice-based interventions are better than conferences for improving professional practice, 60

Behavior therapy, cognitive
Cognitive behavioral therapy and focal interpersonal therapy increased long-term remission of eating disorders, 48
Cognitive behavioral therapy improved function in the chronic fatigue syndrome, 153

Benestent Trial
Stent implantation reduced repeat angioplasty at 1 year in patients with stable angina, 137

Beta-andrenergic receptor agonist
Oral β-agonists probably do not reduce the incidence of preterm delivery, 12

Beta-carotene
Vitamins E and C and β-carotene may not reduce cardiovascular mortality, 86

Blood glucose self-monitoring
Postprandial blood glucose monitoring improved glycaemic control and neonatal outcomes in women with gestational diabetes, 115

Blood pressure
Higher diastolic blood pressure but not total cholesterol level increases the risk for fatal stroke, particularly in middle age, 125
Body mass index
Higher “normal” body weight and gains after 18 years of age increased the risk for CHD in women, 25

Breast neoplasms
Breast-conserving surgery plus radiation therapy was as effective as mastectomy, 49
Brickbats and bouquets for Evidence-Based Medicine (Letter), 134
Different local therapies for early breast cancer do not affect overall survival, 118
Falsified information did not change the conclusions of NSABP B-06 supporting lumpectomy plus radiation therapy for breast cancer, 117
Meta-analysis: Addition of chemotherapy to tamoxifen does not extend quality-adjusted survival in postmenopausal breast cancer, 206
Meta-analysis: Use of combined oral contraceptives in the past 10 years is associated with an increased risk for breast cancer, 220

Breath tests
14C-urea breath test and Giemsa stain were sensitive for detecting Helicobacter pylori, 59
Noninvasive tests were as accurate as invasive tests for detecting Helicobacter pylori, 58

British Regional Heart Study
Stopping smoking decreased the risk for stroke in middle-aged men, 95

Bulimia
Cognitive behavioural therapy and focal interpersonal therapy increased long-term remission of eating disorders, 48

Calcium
Meta-analysis: Calcium supplementation reduces blood pressure and preeclampsia during pregnancy, 173

Captopril
Captopril but not mononitrates or intravenous magnesium reduced short-term mortality after suspected myocardial infarction, 19
Carinoembryonic antigen
Intensified follow-up detected recurrent colorectal cancer earlier than did conventional follow-up but did not affect recurrence or survival, 78
Cardiopulmonary resuscitation
Active compression–decompression CPR for cardiac arrest did not improve survival or neurologic outcomes, 177

Cardiovascular diseases
Simvastatin reduced the costs of coronary heart disease, 221
Carotid stenosis
Duplex Doppler ultrasonography was accurate in determining 60% or greater carotid artery stenosis, 122
Endarterectomy was not effective for moderate symptomatic carotid stenosis, 182

Carvedilol
Carvedilol reduced mortality and hospitalization in chronic heart failure, 212

Catheterization, venous access
Ultrasound aided inexperienced operators in central venous line insertion, 16

CD4+ lymphocyte count
Lamivudine plus zidovudine was an effective initial therapy for HIV-1 infection, 216
Lamivudine plus zidovudine was more effective than continued zidovudine monotherapy for HIV-1 infection, 217

Ceftriaxone
A single dose of ceftriaxone reduced the incidence of wound and nosocomial infections after surgery for closed fractures, 208

Cerebral ischemia
Low-molecular-weight heparin was effective in reducing poor outcome at 6 months in ischemic stroke, 107
Tissue plasminogen activator improved clinical outcome after acute ischemic stroke, 106

Cerebrovascular disorders
Endarterectomy was not effective for moderate symptomatic carotid stenosis, 182
Higher diastolic blood pressure but not total cholesterol level increases the risk for fatal stroke, particularly in middle age, 125
Specialist inpatient stroke unit care reduces mortality and institutionalisation compared with general medical ward care, 11
Stopping smoking decreased the risk for stroke in middle-aged men, 95
Streptokinase led to higher 10-day and 6-month case fatality rates in acute stroke, 108
Vitamins E and C and β-carotene may not reduce cardiovascular mortality, 86
Warfarin was cost-effective for stroke prophylaxis in nonvalvular atrial fibrillation with additional risk factors, 128

Cesarean section
Meta-analysis: Amniotomy does not reduce the rate of cesarean section, 174
Prophylaxis with ampicillin before surgery was more effective than penicillin after surgery in rural Africa, 172
Chemotherapy, adjuvant
Adjuvant intraportal chemotherapy improved survival in colorectal cancer, 18
Meta-analysis: Addition of chemotherapy to tamoxifen does not extend quality-adjusted survival in postmenopausal breast cancer, 206

Child
A metered-dose inhaler with a spacer was more effective than a nebuliser in children with acute asthma, 14
Pavement stencils marking safe areas promoted safe behaviour at school bus stops, 176
Tricyclic drugs are no more effective than placebo in treating depression in children and adolescents, 47

Child abuse
Home visiting programmes reduce childhood injury, 112

Chlamydia trachomatis
Azithromycin was cost-effective for genital Chlamydia trachomatis infections, 160
Chloroquine
Pyronaridine was effective and well tolerated in African patients with acute, uncomplicated falciparum malaria, 150

Chlorthalidone
Antihypertensive drugs had either a neutral or beneficial effect on lipids, 180

Cholecystectomy
Elective small-incision cholecystectomy compared with laparoscopy had a shorter operation time and similar recovery, 170
Open surgery led to fewer recurrent biliary symptoms than did endoscopic sphincterotomy in high-risk elderly patients, 171

Cholesterol
Higher diastolic blood pressure but not total cholesterol level increases the risk for fatal stroke, particularly in middle age, 125
Lovastatin was more effective than stepped care in reducing cholesterol, 179
Simvastatin reduced the costs of coronary heart disease, 221

Chorionic villus sampling
Review: Pregnant women can be offered screening for the Down syndrome, 151

Chronic disease
Greater access to primary care increased both patient satisfaction and hospital readmissions, 219

Cirrhosis
Trimethoprim–sulfamethoxazole reduced bacterial peritonitis occurrence in cirrhosis, 20

Cisplatin
Paclitaxel and cisplatin were superior to cyclophosphamide and cisplatin for advanced ovarian cancer, 152

Claudication
A long-term walking program is the optimal exercise for increasing endurance in claudication pain, 85
Meta-analysis: Duplex ultrasonography is accurate for most peripheral arterial occlusive disease in legs, 185

Clomipramine
Antidepressant drugs relieve symptoms of obsessive-compulsive disorder, 82

Clozapine
Tardive dyskinesia was associated with poor treatment response and higher antipsychotic drug dose after the first episode of schizophrenia, 186

Cocaine
Bupivacaine-norepinephrine was effective and safe during laceration repair in children, 211

Cochrane Collaboration
How members of the Cochrane Collaboration prepare and maintain systematic reviews of the effects of health care (EBM Note), 7

Cognition disorders
Intensive diabetes therapy did not affect neuropsychological functioning, 114

Cognitive behavioral therapy
Cognitive behavioural therapy improved compliance in acutely psychotic inpatients, 154
Cognitive behavioural therapy reduced the frequency and intensity of medically unexplained physical symptoms, 80
Paroxetine plus cognitive behavioural therapy reduced the number of panic attacks in panic disorder, 81

Colectomy
Early oral feeding after elective colorectal surgery was well tolerated, 51

Colorectal neoplasms
Adjuvant intraperitoneal chemotherapy improved survival in colorectal cancer, 18
Intensified follow-up detected recurrent colorectal cancer earlier than did conventional follow-up but did not affect recurrence or survival, 78

Common cold
Intranasal ipratropium bromide reduced rhinorrhea and improved cold symptoms, 205
Zinc lozenges reduced the duration of common cold symptoms, 204

Complications
Expectant management was as effective as D&C for spontaneous abortion, 13
Surgery increased quality of life in benign prostatic hyperplasia, 10

Computer systems
Computer use enhances clinician task performance, 96

Confidence intervals
Use of confidence intervals to indicate uncertainty in research findings (EBM Note), 102

Contraceptives, oral
Meta-analysis: Use of combined oral contraceptives in the past 10 years is associated with an increased risk for breast cancer, 220
Nonfatal venous thromboembolism was associated with oral contraceptives that contain desogestrel and gestodene, 126

Copolymer 1
Copolymer 1 reduced relapse rate and improved disability in multiple sclerosis, 52

Coronary Angioplasty versus Bypass Revascularisation Investigation (CABRI)
CABG led to less angina, reintervention, and medication than did PTCA, but mortality did not differ, 83

Coronary artery bypass grafting
CABG leads to less angina and less reintervention than PTCA, but mortality and subsequent MI are the same, 84
CABG led to less angina, reintervention, and medication than did PTCA, but mortality did not differ, 83

Coronary disease
Cost-effectiveness of cholesterol lowering varied greatly by cardiovascular risk, 223
Higher "normal" body weight and gains after 18 years of age increased the risk for CHD in women, 25
Inverse association between alcohol intake and risk for ischemic heart disease depended on the LDL cholesterol level, 189
Meta-analysis: Psychosocial interventions augment cardiac rehabilitation programs, 178
Pravastatin reduced nonfatal MI without increasing noncardiovascular death in men with hypercholesterolemia, 73
Review: Cholesterol lowering reduces mortality in high-risk, middle-aged men, 142
Review: Modest alcohol consumption lowers risk for coronary heart disease irrespective of the type of drink, 188
Simvastatin reduced the costs of coronary heart disease, 221
Stent implantation reduced repeat angioplasty at 1 year in patients with stable angina, 137
Vitamins E and C and β-carotene may not reduce cardiovascular mortality, 86
Corticosteroids
Antenatal corticosteroids safely reduce the respiratory distress syndrome, 92
Azithromycin was cost-effective for genital Chlamydia trachomatis infections, 160
Consensus double reading of mammograms was more effective and less costly than single reading, 224
Cost-benefit analysis
Costs and survival were higher for acute MI treated with tPA compared with streptokinase, 64
Cost-effectiveness of cholesterol lowering varied greatly by cardiovascular risk, 223
Event recorders provided better data and were more cost-effective than 48-hour Holter monitoring in detecting arrhythmias, 159
Evidence-based purchasing (EBM Note), 101
Noninvasive management strategies were more cost-effective than usual health care in men with hypercholesterolemia, 222
Screening and treatment of diabetic retinopathy was cost-effective, 158
Simvastatin reduced the costs of coronary heart disease, 221
Warfarin was cost-effective for stroke prophylaxis in nonvalvular atrial fibrillation with additional risk factors, 128
Critical care
Meta-analysis: Prophylaxis with anti-ulcer therapy reduces clinically important GI bleeding in critically ill patients, 143
Crohn disease
Fish oil reduced relapse and maintained remission in Crohn disease, 214
Cyclophosphamide
Paclitaxel and cisplatin were superior to cyclophosphamide and cisplatin for advanced ovarian cancer, 152
Depression
Antidepressant drugs relieve symptoms of obsessive-compulsive disorder, 82
Depression predicted cardiac death within 18 months after myocardial infarction, 24
Moclobemide was an effective antidepressant in elderly patients with cognitive decline and depression, 202
Review: SSRIs are as effective as tricyclics and have fewer side effects, but their cost-effectiveness has not been established, 201
Tricyclic drugs are no more effective than placebo in treating depression in children and adolescents, 47
Dexamethasone
Ondansetron reduced emesis in children receiving chemotherapy for leukaemia, 77
Diabetes
Insulin infusion followed by multiple daily insulin injections reduced mortality after MI in diabetes, 41
Intensive glycaemic control prevented or delayed diabetic neuropathy, 9
On some clinically useful measures of the effects of treatment (EBM Note), 37
Practice guidelines improved reporting of patient variables, 127
Diabetes Control and Complications Trial
Intensive diabetes therapy did not adversely affect quality of life, 146
Diabetes, gestational
Postprandial blood glucose monitoring improved glycaemic control and neonatal outcomes in women with gestational diabetes, 115
Diabetes mellitus, insulin-dependent
Intensive diabetes therapy did not adversely affect quality of life, 146
Intensive diabetes therapy did not affect neuropsychological functioning, 114
Diabetes Mellitus Insulin-Glucose Infusion in Acute Myocardial Infarction (DIGAMI) Study
Insulin infusion followed by multiple daily insulin injections reduced mortality after MI in diabetes, 41
Diabetes mellitus, non-insulin-dependent
Multiple insulin injection therapy delayed microvascular complications in NIDDM, 111
Diabetic nephropathies
Multiple insulin injection therapy delayed microvascular complications in NIDDM, 111
Diabetic neuropathies
Multiple insulin injection therapy delayed microvascular complications in NIDDM, 111
Diagnostic
13C-urea breath test and Giemsa stain were sensitive for detecting Helicobacter pylori, 59
Clinical assessment plus ultrasonography accurately predicted deep venous thrombosis, 55
Combur9 urine reagent strips were sensitive and specific in diagnosing viral and bacterial meningitis, 57
Consensus double reading of mammograms was more effective and less costly than single reading, 224
Duplex Doppler ultrasonography was accurate in determining 60% or greater carotid artery stenosis, 122
Electrocardiography was highly sensitive but only moderately specific in detecting chronic heart failure, 155
Electroencephalography is not useful in the routine evaluation of headache, 56
Event recorders provided better data and were more cost-effective than 48-hour Holter monitoring in detecting arrhythmias, 159
Meta-analysis: Duplex ultrasonography is accurate for most peripheral arterial occlusive disease in legs, 185
Noninvasive tests were as accurate as invasive tests for detecting Helicobacter pylori, 58
Pulse oximetry and the WHO algorithm were appropriate for identifying acute lower respiratory tract infection in Peruvian children, 123
Review: Pregnant women can be offered screening for the Down syndrome, 151
Diarrhea
Fish oil reduced relapse and maintained remission in Crohn disease, 214
Reduced-osmolality oral rehydration salts solution shortened the duration of acute diarrheoa, 15
Zinc supplementation reduced duration and severity of diarrheoa in young, poor children, 75
Diazepam
Magnesium sulphate was superior to diazepam or phenytoin for eclampsia, 44
Diet, protein-restricted
Meta-analysis: Dietary protein restriction delays progression in renal disease, 147
Disability
Cognitive behavior therapy improved function in the chronic fatigue syndrome, 153
Disability evaluation
Copolymer 1 reduced relapse rate and improved disability in multiple sclerosis, 52
Disabled
Service dogs improved the lives of persons with ambulatory disabilities, 181
Dose-response relationship, drug
Low-molecular-weight heparin was effective in reducing poor outcome at 6 months in ischemic stroke, 107
Down syndrome
Review: Pregnant women can be offered screening for the Down syndrome, 151
Doxazosin
Antihypertensive drugs had either a neutral or beneficial effect on lipids, 180
Doxycycline
Azithromycin was cost-effective for genital Chlamydia trachomatis infections, 160
Drug therapy, combination
Lamivudine plus zidovudine was an effective initial therapy for HIV-1 infection, 216
Lamivudine plus zidovudine was more effective than continued zidovudine monotherapy for HIV-1 infection, 217
Ductus arteriosus, patent
Meta-analysis: Prophylactic indomethacin reduces patent ductus arteriosus and intraventricular haemorrhage in premature infants, 175
Dutch Trauma Trial
A single dose of ceftriaxone reduced the incidence of wound and nosocomial infections after surgery for closed fractures, 208
Dyskinesia
Tardive dyskinesia was associated with poor treatment response and higher antipsychotic drug dose after the first episode of schizophrenia, 186
Eating disorders
Cognitive behavioural therapy and focal interpersonal therapy increased long-term remission of eating disorders, 48
Echocardiography
Electrocardiography was highly sensitive but only moderately specific in detecting chronic heart failure, 155
Eclampsia
Magnesium sulphate prevented eclampsia better than phenytoin, 45
Magnesium sulphate was superior to diazepam or phenytoin for eclampsia, 44
Salutary lessons from the Collaborative Eclampsia Trial (EBM Note), 39
Economics
Azithromycin was cost-effective for genital Chlamydia trachomatis infections, 160
Consensus double reading of mammograms was more effective and less costly than single reading, 224
Cost-effectiveness of cholesterol lowering varied greatly by cardiovascular risk, 223
Costs and survival were higher for acute MI treated with tPA compared with streptokinase, 64
Event recorders provided better data and were more cost-effective than 48-hour Holter monitoring in detecting arrhythmias, 159
Evidence-based purchasing (EBM Note), 101
Immunisation could reduce the cost of rotavirus gastroenteritis, 63
The nicotine patch was a cost-effective adjunct to smoking cessation, 192
Noninvasive management strategies were more cost-effective in suspected peptic ulcer disease, 62
Physician extenders were more cost-effective than usual health care in men with hypercholesterolemia, 222
Screening and treatment of diabetic retinopathy was cost-effective, 158
Simvastatin reduced the costs of coronary heart disease, 221
Warfarin was cost-effective for stroke prophylaxis in nonvalvular atrial fibrillation with additional risk factors, 128

Education
Pulmonary rehabilitation initially improved function and symptoms more than education in COPD, 43

Education, medical, continuing
On the need for evidence-based general and family practice (EBM Note), 68
Systematic practice-based interventions are better than conferences for improving professional practice, 60

Electrocardiography
Electrocardiography was highly sensitive but only moderately specific in detecting chronic heart failure, 155

Electrocardiography, ambulatory
Event recorders provided better data and were more cost-effective than 48-hour Holter monitoring in detecting arrhythmias, 159

Electroencephalography
Electroencephalography is not useful in the routine evaluation of headache, 56

Emetics
Ondansetron reduced emesis in children receiving chemotherapy for leukaemia, 77

Enalapril
Antihypertensive drugs had either a neutral or beneficial effect on lipids, 180

Endarterectomy, carotid
Endarterectomy was not effective for moderate symptomatic carotid stenosis, 182

Endoscopy
Noninvasive management strategies were more cost-effective in suspected peptic ulcer disease, 62

Estrogen
Nonfatal venous thromboembolism was associated with oral contraceptives that contain desogestrel and gestodene, 126

Etiology
Baseline clinical factors accurately predicted 30-day mortality after myocardial infarction in patients considered for thrombosis, 22
Higher "normal" body weight and gains after 18 years of age increased the risk for CHD in women, 25
Inverse association between alcohol risk and risk for ischemic heart disease depended on the LDL cholesterol level, 189
Men who maintained or improved physical fitness had reduced risk for all-cause and CVD mortality, 26
Meta-analysis: Environmental tobacco smoke increases childhood morbidity and mortality, 187
Meta-analysis: Use of combined oral contraceptives in the past 10 years is associated with an increased risk for breast cancer, 220
Nonfatal venous thromboembolism was associated with oral contraceptives that contain desogestrel and gestodene, 126
Standing and walking for > 5 hours per work day increased the risk for preterm delivery, 28

Stopping smoking decreased the risk for stroke in middle-aged men, 95
Total physical activity and mortality were inversely related in men, 27

Evidence-based medicine
On the need for evidence-based medicine (EBM Note), 5
Transferring evidence from research into practice: 1. The role of clinical care research evidence in clinical decisions (EBM Note), 196
A long-term walking program is the optimal exercise for increasing endurance in claudication pain, 85

Exercise
Meta-analysis: Several strategies prevent falls and subsequent injury in older persons, 169
n of 1 trials led to less theophylline use with no adverse effects, 184
Ordinary activity was best for acute low-back pain, 21

Famiclovir
Famiclovir reduced lesion healing time in recurrent genital herpes, 215

Family practice
Computer use enhances clinician task performance, 96
Obstetrician-led shared care was not better than care from general practitioners and community midwives in low-risk pregnant women, 190
A reduced schedule of antenatal visits resulted in similar clinical outcomes, poorer psychosocial outcomes, and less satisfaction, 191
On the need for evidence-based general and family practice (EBM Note), 68
Practice guidelines improved reporting of patient variables, 127

Family therapy
Family intervention reduces relapse rates, rehospitalisation, and costs and increases compliance with medication in schizophrenia, 121

Fatigue syndrome, chronic
Cognitive behavior therapy improved function in the chronic fatigue syndrome, 153

Feeding methods
Early oral feeding after elective colorectal surgery was well tolerated, 51

Fetal membranes, premature rupture
Meta-analysis: Amniotomy does not reduce the rate of caesarean section, 174

Fetal monitoring
Routine intrapartum electronic fetal monitoring decreases neonatal seizures but increases operative deliveries, 93

Fish oils
Fish oil reduced relapse and maintained remission in Crohn disease, 214

Food, fortified
Zinc supplementation reduced duration and severity of diarrhea in young, poor children, 75

</tbody>
</table>
Herpes genitalis
Famciclovir reduced lesion healing time in recurrent genital herpes, 215

Histamine H2 antagonists
Meta-analysis: Prophylaxis with anti-ulcer therapy reduces clinically important GI bleeding in critically ill patients, 143

HIV infections
Lamivudine plus zidovudine was an effective initial therapy for HIV-1 infection, 216
Lamivudine plus zidovudine was more effective than continued zidovudine monotherapy for HIV-1 infection, 217

Hospital mortality
D2 resection led to higher mortality and morbidity than D1 resection for gastric cancer, 207

House calls
Home visiting programmes reduce childhood injury, 112
Meta-analysis: Several strategies prevent falls and subsequent injury in older persons, 169
How to search for and find evidence about therapy (EBM Note), 70

Hydroxymethylglutaryl CoA reductases
Simvastatin reduced the costs of coronary heart disease, 221

Hypercholesterolemia
Cost-effectiveness of cholesterol lowering varied greatly by cardiovascular risk, 223
Physician extenders were more cost-effective than usual health care in men with hypercholesterolemia, 222
Pravastatin reduced nonfatal MI without increasing noncardiovascular death in men with hypercholesterolemia, 73

Hypertension
Antihypertensive drugs decrease mortality, coronary events, and stroke in elderly persons, 105
Antihypertensive drugs had either a neutral or beneficial effect on lipids, 180
Magnesium sulphate prevented eclampsia better than phenytoin, 45
Meta-analysis: Calcium supplementation reduced blood pressure and preeclampsia during pregnancy, 173

Hypoglycemia
Intensive diabetes therapy did not affect neuropsychological functioning, 114

Hysterectomy
Prophylaxis with ampicillin before surgery was more effective than penicillin after surgery in rural Africa, 172

Immunization
Acellular pertussis vaccines were safe and effective, 148-149
Immunisation could reduce the cost of rotavirus gastroenteritis, 63

Indomethacin
Meta-analysis: Prophylactic indomethacin reduces patent ductus arteriosus and intraventricular haemorrhage in premature infants, 175

Infant mortality
Antenatal corticosteroids safely reduce the respiratory distress syndrome, 92
Magnesium sulphate was superior to diazepam or phenytoin for eclampsia, 44
Routine intrapartum electronic fetal monitoring decreases neonatal seizures but increases operative deliveries, 93

Infant nutrition
Zinc supplementation reduced duration and severity of diarrhoea in young, poor children, 75

Infant, low birth weight
Meta-analysis: Prophylactic indomethacin reduces patent ductus arteriosus and intraventricular haemorrhage in premature infants, 175

Infant, newborn
Sn-mesoporphyrin controlled neonatal hyperbilirubinaemia faster than phototherapy, 54

Infants
Acellular pertussis vaccines were safe and effective, 148-149
Pertussis-toxoid vaccine was effective and safe, 113

Infection
Meta-analysis: Antibiotics at the time of a therapeutic abortion protect against upper genital tract infections, 218

Information systems
Research intelligence for policy and practice: the role of the National Health Service Centre for Reviews and Dissemination (EBM Note), 167

Informed consent
Informed consent decreased patient interest in prostate-specific antigen screening, 203

Institutionalization
Specialist inpatient stroke unit care reduces mortality and institutionalization compared with general medical ward care, 11

Insulin
Intensive diabetes therapy did not adversely affect quality of life, 146
On some clinically useful measures of the effects of treatment (EBM Note), 37
Postprandial blood glucose monitoring improved glycaemic control and neonatal outcomes in women with gestational diabetes, 115

Insulin infusion systems
Insulin infusion followed by multiple daily insulin injections reduced mortality after MI in diabetes, 41

Insurance claims review
Meta-analysis: Pursuing compensation after closed-head injury slows recovery, 157

Intensive care units
Noninvasive ventilation decreased mortality and the need for endotracheal intubation for COPD exacerbation, 104

Interferon-beta
Interferon β-1a slowed progression of disability in multiple sclerosis, 183
Interferon β-1b reduced exacerbations in multiple sclerosis, 53

238 Subject Index Evidence-Based Medicine November/December 1996; first published as 10.1136/ebm.1996.1.230 on 1 December 1996. Downloaded from http://ebm.bmj.com/ on February 24, 2022 by guest. Protected by copyright.
Internship and residency

Ultrasound aided inexperienced operators in central venous line insertion, 16

Intestine, large

Suturing and stapling were equally effective for large-bowel anastomosis, 17

Intubation, gastrointestinal

Early oral feeding after elective colorectal surgery was well tolerated, 51

Intubation, intratraheal

Noninvasive ventilation decreased mortality and the need for endotracheal intubation for COPD exacerbation, 90

Ipratropium

Intranasal ipratropium bromide reduced rhinorrhea and improved cold symptoms, 205

ISIS-4 (Fourth International Study of Infarct Survival)

Captopril but not mononitrate or intravenous magnesium reduced short-term mortality after suspected myocardial infarction, 19

Japan

Multiple insulin injection therapy delayed microvascular complications in NIDDM, 111

Jaundice, neonatal

Sn-mesoporphyrin controlled neonatal hyperbilirubinemia faster than phototherapy, 54

Knee prosthesis

Ardeparin plus graduated compression stockings prevented DVT after knee surgery, 213

Labor

Antenatal corticosteroids safely reduce the respiratory distress syndrome, 92

Care from a midwife team was effective, 94

Magnesium sulphate prevented eclampsia better than phenytoin, 45

Meta-analysis: Amniotomy does not reduce the rate of caesarean section, 174

Labor, premature

Oral β-agonists probably do not reduce the incidence of preterm delivery, 12

Laparoscopy

Elective small-incision cholecystectomy compared with laparoscopy had a shorter operation time and similar recovery, 170

Greater access to primary care increased both patient satisfaction and hospital readmissions, 219

Laparoscopy caused longer operating times and shorter hospital stays than did open appendectomy, 79

Normothermia during colorectal resection reduced surgical-wound infection and length of hospital stay, 210

Leukemia

Ondansetron reduced emesis in children receiving chemotherapy for leukaemia, 77

Life expectancy

Warfarin was cost-effective for stroke prophylaxis in nonvalvular atrial fibrillation with additional risk factors, 128

Life tables

Cost-effectiveness of cholesterol lowering varied greatly by cardiovascular risk, 223

Light coagulation

Screening and treatment of diabetic retinopathy was cost-effective, 158

Lipids

Antihypertensive agents affect serum lipid levels, 29

Lipoproteins, HDL cholesterol

Antihypertensive drugs had either a neutral or beneficial effect on lipids, 180

Lipoproteins, LDL cholesterol

Antihypertensive drugs had either a neutral or beneficial effect on lipids, 180

Lisinopril

Early treatment with lisinopril for 6 weeks reduced mortality at 6 months in acute MI, 139

Lovastatin

Lovastatin was more effective than stepped care in reducing cholesterol, 179

Low back pain

Ordinary activity was best for acute low-back pain, 21

Lung

Cisplatin-based chemotherapy has a small survival benefit in locally advanced and advanced non-small cell lung cancer, 116

Lung diseases, obstructive

Noninvasive ventilation decreased mortality and the need for endotracheal intubation for COPD exacerbation, 90

Pulmonary rehabilitation initially improved function and symptoms more than education in COPD, 43

Lymph node excision

D2 resection led to higher mortality and morbidity than D1 resection for gastric cancer, 207

Magnesium

Captopril but not mononitrate or intravenous magnesium reduced short-term mortality after suspected myocardial infarction, 19

Magnesium sulphate prevented eclampsia better than phenytoin, 45
Magnesium sulphate was superior to diazepam or phenytoin for eclampsia, 44
Salutary lessons from the Collaborative Eclampsia Trial (EBM Note), 39
Malaria, falciparum
Pyronaridine was effective and well tolerated in African patients with acute, uncomplicated falciparum malaria, 150
Malingering
Meta-analysis: Pursuing compensation after closed-head injury slows recovery, 137
Mammography
Consensus double reading of mammograms was more effective and less costly than single reading, 224
Physician reminders and audit with feedback are effective in increasing breast cancer screening, 31
Mass screening
Falsified information did not change the conclusions of NSABP B-06 supporting lumpectomy plus radiation therapy for breast cancer, 117
Mastectomy
Breast-conserving surgery plus radiation therapy was as effective as mastectomy, 49
Different local therapies for early breast cancer do not affect overall survival, 118
Falsified information did not change the conclusions of NSABP B-06 supporting lumpectomy plus radiation therapy for breast cancer, 117
Maternal mortality
Magnesium sulphate was superior to diazepam or phenytoin for eclampsia, 44
Medical education, continuing
Physician reminders and audit with feedback are effective in increasing breast cancer screening, 31
Medical rounds
Practice guidelines improved reporting of patient variables, 127
Men
Baseline clinical factors accurately predicted 30-day mortality after myocardial infarction in patients considered for thrombosis, 22
Men who maintained or improved physical fitness had reduced risk for all-cause and CVD mortality, 26
Pravastatin reduced nonfatal MI without increasing noncardiovascular death in men with hypercholesterolemia, 73
Review: Cholesterol lowering reduces mortality in high-risk, middle-aged men, 142
Shouldice hernia repair had a lower recurrence rate than Bassini or Cooper ligament (McVay) repair, 119
Stopping smoking decreased the risk for stroke in middle-aged men, 95
Total physical activity and mortality were inversely related in men, 27
Women and men have similar outcomes after myocardial infarction, 23
Meningitis, bacterial
Combur9 urine reagent strips were sensitive and specific in diagnosing viral and bacterial meningitis, 57
Mental disorders
Social services case management did not improve behaviour or quality of life in persons with long-term mental disorders, 50
Mesoporphyrins
Sn-mesoporphyrin controlled neonatal hyperbilirubinemia faster than phototherapy, 54
Meta-analysis
Antenatal corticosteroids safely reduce the respiratory distress syndrome, 92
Anticonvulsant drugs reduce pain in trigeminal neuralgia and diabetic neuropathy and are effective for migraine prophylaxis, 89
Antidepressant drugs relieve symptoms of obsessive-compulsive disorder, 82
Antihypertensive agents affect serum lipid levels, 29
Antihypertensive agents affect overall survival, 29
Cardiovascular disease follows atherosclerosis, 22
CABG leads to less angina and less reintervention than PTCA, but mortality and subsequent MI are the same, 84
Cisplatin-based chemotherapy has a small survival benefit in locally advanced and advanced non-small cell lung cancer, 116
Corticosteroids do not reduce mortality in sepsis and septic shock, 74
Different local therapies for early breast cancer do not affect overall survival, 118
Family intervention reduces relapse rates, rehospitalisation, and costs and increases compliance with medication in schizophrenia, 121
Higher diastolic blood pressure but not total cholesterol level increases the risk for fatal stroke, particularly in middle age, 125
Home visiting programmes reduce childhood injury, 112
A long-term walking program is the optimal exercise for increasing endurance in claudication pain, 85
Corticosteroids do not reduce mortality in sepsis and septic shock, 74
Different local therapies for early breast cancer do not affect overall survival, 118
Family intervention reduces relapse rates, rehospitalisation, and costs and increases compliance with medication in schizophrenia, 121
Higher diastolic blood pressure but not total cholesterol level increases the risk for fatal stroke, particularly in middle age, 125
Home visiting programmes reduce childhood injury, 112
A long-term walking program is the optimal exercise for increasing endurance in claudication pain, 85
Meta-analysis: A single daily dose of aminoglycosides is as effective as multiple daily dosing in immunocompetent adults, 145
Meta-analysis: A single daily dose of aminoglycosides is as effective as multiple daily dosing with less nephrotoxicity, 144
Meta-analysis: Addition of chemotherapy to tamoxifen does not extend quality-adjusted survival in postmenopausal breast cancer, 206
Meta-analysis: Amniotomy does not reduce the rate of caesarean section, 174
Meta-analysis: Antibiotics at the time of a therapeutic abortion protect against upper genital tract infections, 218
Meta-analysis: Calcium supplementation reduces blood pressure and preeclampsia during pregnancy, 173
Meta-analysis: Dietary protein restriction delays progression in renal disease, 147
Meta-analysis: Duplex ultrasonography is accurate for most peripheral arterial occlusive disease in legs, 187
Meta-analysis: Environmental tobacco smoke increases childhood morbidity and mortality, 187
Meta-analysis: Many factors affect mortality from community-acquired pneumonia, 156

Meta-analysis: Prophylactic indomethacin reduces patent ductus arteriosus and intraventricular haemorrhage in premature infants, 175

Meta-analysis: Prophylaxis with anti-ulcer therapy reduces clinically important GI bleeding in critically ill patients, 143

Meta-analysis: Psychosocial interventions augment cardiac rehabilitation programs, 178

Meta-analysis: Pursuing compensation after closed-head injury slows recovery, 157

Meta-analysis: Several strategies prevent falls and subsequent injury in older persons, 169

Meta-analysis: Shouldice technique is superior to the Bassini or McVay methods of hernia repair, 209

Meta-analysis: Use of combined oral contraceptives in the past 10 years is associated with an increased risk for breast cancer, 220

Oral β-agonists probably do not reduce the incidence of preterm delivery, 12

Routine intrapartum electronic fetal monitoring decreases neonatal seizures but increases operative deliveries, 93

Specialist inpatient stroke unit care reduces mortality and institutionalisation compared with general medical ward care, 11

Tricyclic drugs are no more effective than placebo in treating depression in children and adolescents, 47

Metoclopramide

Ondansetron reduced emesis in children receiving chemotherapy for leukaemia, 77

Metronidazole

Quadruple therapy eradicated H. pylori-associated peptic ulcer disease better than dual therapy, 109

Triple therapy eradicated H. pylori infection better than dual therapy, 110

Midwifery

Care from a midwife team was effective, 94

A reduced schedule of antenatal visits resulted in similar clinical outcomes, poorer psychosocial outcomes, and less satisfaction, 191

Mifepristone

Vaginal misoprostol was superior to oral misoprostol after pretreatment with mifepristone in induced abortion, 46

Migraine

Electroencephalography is not useful in the routine evaluation of headache, 56

Misoprostol

Vaginal misoprostol was superior to oral misoprostol after pretreatment with mifepristone in induced abortion, 46

Moclobemide

Moclobemide was an effective antidepressant in elderly patients with cognitive decline and depression, 202

Morbidity

D: resection led to higher mortality and morbidity than D: resection for gastric cancer, 207

Meta-analysis: Environmental tobacco smoke increases childhood morbidity and mortality, 187

Meta-analysis: Psychosocial interventions augment cardiac rehabilitation programs, 178

Mortality

Active compression-decompression CPR for cardiac arrest did not improve survival or neurologic outcomes, 177

Baseline clinical factors accurately predicted 30-day mortality after myocardial infarction in patients considered for thrombosis, 22

CABG leads to less angina and less reintervention than PTCA, but mortality and subsequent MI are the same, 84

CABG led to less angina, reintervention, and medication than did PTCA, but mortality did not differ, 83

Captopril but not mononitratr or intravenous magnesium reduced short-term mortality after suspected myocardial infarction, 19

Carvedilol reduced mortality and hospitalization in chronic heart failure, 212

Cisplatin-based chemotherapy has a small survival benefit in locally advanced and advanced non-small cell lung cancer, 116

Corticosteroids do not reduce mortality in sepsis and septic shock, 74

Depression predicted cardiac death within 18 months after myocardial infarction, 24

Early treatment with lisinopril for 6 weeks reduced mortality at 6 months in acute MI, 139

Insulin infusion followed by multiple daily insulin injections reduced mortality after MI in diabetes, 41

Magnesium sulphate was superior to diazepam or phenytoin for eclampsia, 44

Men who maintained or improved physical fitness had reduced risk for all-cause and CVD mortality, 26

Meta-analysis: A single daily dose of aminoglycosides is as effective as multiple daily dosing in immunocompetent adults, 145

Meta-analysis: A single daily dose of aminoglycosides is as effective as multiple daily dosing with less nephrotoxicity, 144

Meta-analysis: Environmental tobacco smoke increases childhood morbidity and mortality, 187

Meta-analysis: Many factors affect mortality from community-acquired pneumonia, 156

Meta-analysis: Psychosocial interventions augment cardiac rehabilitation programs, 178

Nonfatal venous thromboembolism was associated with oral contraceptives that contain desogestrel and gestodene, 126

Oral β-agonists probably do not reduce the incidence of preterm delivery, 12

Prehospital thrombolytic therapy reduced mortality in acute MI, 138

Review: Cholesterol lowering reduces mortality in high-risk, middle-aged men, 142

Specialist inpatient stroke unit care reduces mortality and institutionalisation compared with general medical ward care, 11

Stent implantation reduced repeat angioplasty at 1 year in patients with stable angina, 137

Streptokinase led to higher 10-day and 6-month case fatality rates in acute stroke, 108

Total physical activity and mortality were inversely related in men, 27
Vitamins E and C and β-carotene may not reduce cardiovascular mortality, 86
Women and men have similar outcomes after myocardial infarction, 23
Multicentre Acute Stroke Trial (MAST-I)
Streptokinase led to higher 10-day and 6-month case fatality rates in acute stroke, 108
Multiple sclerosis
Copolymer 1 reduced relapse rate and improved disability in multiple sclerosis, 52
Interferon β-1a slowed progression of disability in multiple sclerosis, 183
Interferon β-1b reduced exacerbations in multiple sclerosis, 53
Myocardial infarction
Baseline clinical factors accurately predicted 30-day mortality after myocardial infarction in patients considered for thrombosis, 22
Captopril but not mononitrate or intravenous magnesium reduced short-term mortality after suspected myocardial infarction, 19
Carvedilol reduced mortality and hospitalization in chronic heart failure, 212
Costs and survival were higher for acute MI treated with tPA compared with streptokinase, 64
Depression predicted cardiac death within 18 months after myocardial infarction, 24
Early treatment with lisinopril for 6 weeks reduced mortality at 6 months in acute MI, 139
Inulin infusion followed by multiple daily insulin injections reduced mortality after MI in diabetes, 41
Pravastatin reduced nonfatal MI without increasing noncardiovascular death in men with hypercholesterolemia, 73
Prehospital thrombolytic therapy reduced mortality in acute MI, 138
Total physical activity and mortality were inversely related in men, 27
Women and men have similar outcomes after myocardial infarction, 23
Myocardial revascularization
Simvastatin reduced the costs of coronary heart disease, 220
National Institute of Neurological Disorders and Stroke rt-PA Stroke Study Group
Tissue plasminogen activator improved clinical outcome after acute ischemic stroke, 106

Neuropathy
Intensive glycaemic control prevented or delayed diabetic neuropathy, 9
Neuropsychological tests
Intensive diabetes therapy did not affect neuropsychological functioning, 114
Nicotine
The nicotine patch was a cost-effective adjunct to smoking cessation, 192
Nitrate
Captopril but not mononitrate or intravenous magnesium reduced short-term mortality after suspected myocardial infarction, 19
Nurses' Health Study
Higher "normal" body weight and gains after 18 years of age increased the risk for CHD in women, 25
Nursing homes
Annual comprehensive geriatric assessments improved community living, 88

O
Obsessive-compulsive disorder
Antidepressant drugs relieve symptoms of obsessive-compulsive disorder, 82
Obstetricians
Obstetrician-led shared care was not better than care from general practitioners and community midwives in low-risk pregnant women, 190
Obstetrics
Antenatal corticosteroids safely reduce the respiratory distress syndrome, 92
High vitamin A intake in early pregnancy was associated with birth defects, 124
Magnesium sulphate was superior to diazepam or phenytoin for eclampsia, 44
The need for evidence-based obstetrics (EBM Note), 132
Vaginal misoprostol was superior to oral misoprostol after pretreatment with mifepristone in induced abortion, 46
Odds ratio
Down with odds ratios! (EBM Note), 164
Office automation
Computer use enhances clinician task performance, 96
Oliguria
Meta-analysis: Prophylactic indomethacin reduces patent ductus arteriosus and intraventricular haemorrhage in premature infants, 175
Omeprazole
Quadruple therapy eradicated H. pylori-associated peptic ulcer disease better than dual therapy, 109
Tripe therapy eradicated H. pylori infection better than dual therapy, 110
Ondansetron
Ondansetron reduced emesis in children receiving chemotherapy for leukaemia, 77
Osomolarity
Reduced-osmolarity oral rehydration salts solution shortened the duration of acute diarrhoea, 15
Outcome assessment (health care)
Tissue plasminogen activator improved clinical outcome after acute ischemic stroke, 106

Ovarian neoplasms
Paclitaxel and cisplatin were superior to cyclophosphamide and cisplatin for advanced ovarian cancer, 152

Oximetry
Pulse oximetry and the WHO algorithm were appropriate for identifying acute lower respiratory tract infection in Peruvian children, 123

Paclitaxel
Paclitaxel and cisplatin were superior to cyclophosphamide and cisplatin for advanced ovarian cancer, 152

Pain
Anticonvulsant drugs reduce pain in trigeminal neuralgia and diabetic neuropathy and are effective for migraine prophylaxis, 89
A long-term walking program is the optimal exercise for increasing endurance in claudication pain, 85

Pain measurement
Bupivacaine-norepinephrine was effective and safe during laceration repair in children, 211

Pain, postoperative
Effectiveness of pre-emptive analgesia is unproven, 50

Pancreatectomy
D2 resection led to higher mortality and morbidity than D1 resection for gastric cancer, 207

Panic disorder
Paroxetine plus cognitive behavioural therapy reduced the number of panic attacks in panic disorder, 81

Paroxetine
Paroxetine plus cognitive behavioural therapy reduced the number of panic attacks in panic disorder, 81

Patient compliance
Cognitive behavioural therapy improved compliance in acutely psychotic inpatients, 154
Family intervention reduces relapse rates, rehospitalisation, and costs and increases compliance with medication in schizophrenia, 121

Patient education
Multidisciplinary approach reduced readmissions in patients with CHF, 87
Physician reminders and audit with feedback are effective in increasing breast cancer screening, 31

Patient outcomes
Systematic practice-based interventions are better than conferences for improving professional practice, 60

Patient readmission
Greater access to primary care increased both patient satisfaction and hospital readmissions, 219
Multidisciplinary approach reduced readmissions in patients with CHF, 87
Open surgery led to fewer recurrent biliary symptoms than did endoscopic sphincterotomy in high-risk elderly patients, 171

Pelvic inflammatory disease
Meta-analysis: Antibiotics at the time of a therapeutic abortion protect against upper genital tract infections, 218

Penicillin G
Prophylaxis with ampicillin before surgery was more effective than penicillin after surgery in rural Africa, 172

Peptic ulcer
Noninvasive management strategies were more cost-effective in suspected peptic ulcer disease, 62
Quadruple therapy eradicated H. pylori-associated peptic ulcer disease better than dual therapy, 109
Triple therapy eradicated H. pylori infection better than dual therapy, 110

Peripheral vascular disease
Vitamins E and C and ß-carotene may not reduce cardiovascular mortality, 86

Peritonitis
Trimethoprim-sulfamethoxazole reduced bacterial peritonitis occurrence in cirrhosis, 20

Pertussis
Acellular pertussis vaccines were safe and effective, 148-149

Phenyltoin
Magnesium sulphate prevented eclampsia better than phenytoin, 45
Magnesium sulphate was superior to diazepam or phenytoin for eclampsia, 44

Phlebography
Clinical assessment plus ultrasonography accurately predicted deep venous thrombosis, 55

Phototherapy
Sn-mesoporphyrin controlled neonatal hyperbilirubinemia faster than phototherapy, 54

Physical examination
Clinical assessment plus ultrasonography accurately predicted deep venous thrombosis, 55
Pulse oximetry and the WHO algorithm were appropriate for identifying acute lower respiratory tract infection in Peruvian children, 123

Physical fitness
Men who maintained or improved physical fitness had reduced risk for all-cause and CVD mortality, 26

Physician assistants
Physician extenders were more cost-effective than usual health care in men with hypercholesterolemia, 222

Physician's practice patterns
Computer use enhances clinician task performance, 96
On the need for evidence-based psychiatry (EBM Note), 199
Research intelligence for policy and practice: the role of the National Health Service Centre for Reviews and Dissemination (EBM Note), 167
The need for evidence-based obstetrics (EBM Note), 132

Physicians
Physicians' practice patterns
Computer use enhances clinician task performance, 96

Interventions improve primary care processes but not necessarily outcomes, 61
Systematic practice-based interventions are better than conferences for improving professional practice, 60

Pneumonia
- Meta-analysis: Many factors affect mortality from community-acquired pneumonia, 156

Portal vein
- Adjuvant intraportal chemotherapy improved survival in colorectal cancer, 18

Postoperative care
- Adjuvant intraportal chemotherapy improved survival in colorectal cancer, 18
- Effectiveness of pre-emptive analgesia is unproven, 50

Pravastatin
- Pravastatin reduced nonfatal MI without increasing noncardiovascular death in men with hypercholesterolemia, 73

Pre-eclampsia
- Magnesium sulphate prevented eclampsia better than phenytoin, 45
- Meta-analysis: Calcium supplementation reduces blood pressure and preeclampsia during pregnancy, 173

Preanaesthetic medication
- Effectiveness of pre-emptive analgesia is unproven, 50

Pregnancy
- A reduced schedule of antenatal visits resulted in similar clinical outcomes, poorer psychosocial outcomes, and less satisfaction, 191
- Magnesium sulphate prevented eclampsia better than phenytoin, 45
- Meta-analysis: Calcium supplementation reduces blood pressure and preeclampsia during pregnancy, 173
- The need for evidence-based obstetrics (EBM Note), 132
- Obstetrician-led shared care was not better than care from general practitioners and community midwives in low-risk pregnant women, 190
- Postprandial blood glucose monitoring improved glycaemic control and neonatal outcomes in women with gestational diabetes, 115
- Vaginal misoprostol was superior to oral misoprostol after pretreatment with mifepristone in induced abortion, 46

Pregnancy, ectopic
- Prophylaxis with ampicillin before surgery was more effective than penicillin after surgery in rural Africa, 172

Prenatal care
- Care from a midwife team was effective, 94
- The need for evidence-based obstetrics (EBM Note), 132

Prevention and control
- A single dose of ceftriaxone reduced the incidence of wound and nosocomial infections after surgery for closed fractures, 208
- Greater access to primary care increased both patient satisfaction and hospital readmissions, 219

Primary care
- Interventions improve primary care processes but not necessarily outcomes, 61

Prophylaxis with ampicillin before surgery was more effective than penicillin after surgery in rural Africa, 172

Systematic practice-based interventions are better than conferences for improving professional practice, 60

The nicotine patch was a cost-effective adjunct to smoking cessation, 192

Progestagen
- Nonfatal venous thromboembolism was associated with oral contraceptives that contain desogestrel and gestodene, 126

Prognosis
- High vitamin A intake in early pregnancy was associated with birth defects, 124
- Meta-analysis: Many factors affect mortality from community-acquired pneumonia, 156
- Tardive dyskinesia was associated with poor treatment response and higher antipsychotic drug dose after the first episode of schizophrenia, 186

Prostatic hypertrophy
- Surgery increased quality of life in benign prostatic hyperplasia, 10

Psychiatric stress
- A standardised psychiatric consultation lowered costs of care and improved physical functioning in somatising patients, 32
- On the need for evidence-based psychiatry (EBM Note), 199
- Social services case management did not improve behaviour or quality of life in persons with long-term mental disorders, 30

Psychosocial interventions
- Meta-analysis: Psychosocial interventions augment cardiac rehabilitation programs, 178

Psychotic disorders
- Cognitive behavioural therapy improved compliance in acutely psychotic inpatients, 154

Pulmonary embolism
- Ardeparin plus graduated compression stockings prevented DVT after knee surgery, 213
- Fewer venous thromboembolism recurrences occurred with 6 months than with 6 weeks of anticoagulant therapy, 42
- Subcutaneous heparin plus pneumatic compression stockings prevented pulmonary embolism after cardiac surgery, 120

Pyronaridine
- Pyronaridine was effective and well tolerated in African patients with acute, uncomplicated falciparum malaria, 150
Quality improvement
Obstetrician-led shared care was not better than care from
general practitioners and community midwives in low-
risk pregnant women, 190
Practice guidelines improved reporting of patient vari-
ables, 127
A reduced schedule of antenatal visits resulted in similar
clinical outcomes, poorer psychosocial outcomes, and
less satisfaction, 191
Systematic practice-based interventions are better than
conferences for improving professional practice, 60
Quality of life
Intensive diabetes therapy did not adversely affect quality
of life, 146
Meta-analysis: Addition of chemotherapy to tamoxifen
does not extend quality-adjusted survival in postmeno-
pausal breast cancer, 206
Multidisciplinary approach reduced readmissions in
patients with CHF, 87
n of 1 trials led to less theophylline use with no adverse
effects, 184
Surgery increased quality of life in benign prostatic
hyperplasia, 10

Radiotherapy
Breast-conserving surgery plus radiation therapy was as
effective as mastectomy, 49
Different local therapies for early breast cancer do not
affect overall survival, 118
Falsified information did not change the conclusions of
NSABP B-06 supporting lumpectomy plus radiation
therapy for breast cancer, 117
Reading
On the need for evidence-based general and family
practice (EBM Note), 68
Reagent strips
Combur 9 urine reagent strips were sensitive and specific
in diagnosing viral and bacterial meningitis, 57
Recovery rate
Cognitive behavioural therapy reduced the frequency and
intensity of medically unexplained physical symptoms, 80
Recurrence
Coprovel 1 reduced relapse rate and improved disability
in multiple sclerosis, 52
Family intervention reduces relapse rates, rehospital-
isation, and costs and increases compliance with
medication in schizophrenia, 121
Fish oil reduced relapse and maintained remission in
Crohn disease, 214
Intensified follow-up detected recurrent colorectal cancer
earlier than did conventional follow-up but did not
affect recurrence or survival, 78
Interferon β-1b reduced exacerbations in multiple
sclerosis, 53
Meta-analysis: Shouldice technique is superior to the
Bassini or McVay methods of hernia repair, 209
Open surgery led to fewer recurrent biliary symptoms
than did endoscopic sphincterotomy in high-risk
elderly patients, 171
Oral β-agonists probably do not reduce the incidence of
preterm delivery, 12
Shouldice hernia repair had a lower recurrence rate than
Bassini or Cooper ligament (McVay) repair, 119
The nicotine patch was a cost-effective adjunct to smoking
cessation, 192
Primary care
The nicotine patch was a cost-effective adjunct to smoking
cessation, 192
Referral and consultation
A standardised psychiatric consultation lowered costs of
care and improved physical functioning in somatising
patients, 32
Rehabilitation
A long-term walking program is the optimal exercise for
increasing endurance in claudication pain, 85
Pulmonary rehabilitation initially improved function and
symptoms more than education in COPD, 43
Rehydration
Reduced-osmolarity oral rehydration salts solution
shortened the duration of acute diarrhoea, 15
Relative risk
Higher “normal” body weight and gains after 18 years of
age increased the risk for CHD in women, 25
Reminder systems
Physician reminders and audit with feedback are effective
in increasing breast cancer screening, 31
Research
On the need for evidence-based psychiatry (EBM Note), 199
Respiratory distress syndrome
Antenatal corticosteroids safely reduce the respiratory
distress syndrome, 92
Respiratory function test
Pulmonary rehabilitation initially improved function and
symptoms more than education in COPD, 43
Respiratory tract infections
Pulse oximetry and the WHO algorithm were appropriate
for identifying acute lower respiratory tract infection in
Peruvian children, 123
Return to work
Laparoscopy caused longer operating times and shorter
hospital stays than did open appendectomy, 79
Review
Computer use enhances clinician task performance, 96
Effectiveness of pre-emptive analgesia is unproven, 50
Electroencephalography is not useful in the routine
evaluation of headache, 56
Interventions improve primary care processes but not
necessarily outcomes, 61
Inverse association between alcohol intake and risk for
ischemic heart disease depended on the LDL choles-
terol level, 189
Physician reminders and audit with feedback are effective
in increasing breast cancer screening, 31
Review: Cholesterol lowering reduces mortality in high-
risk, middle-aged men, 142
Review: Modest alcohol consumption lowers risk for coronary heart disease irrespective of the type of drink, 188
Review: Pregnant women can be offered screening for the Down syndrome, 151
Review: SSRIs are as effective as tricyclics and have fewer side effects, but their cost-effectiveness has not been established, 201
Systematic practice-based interventions are better than conferences for improving professional practice, 60
Vitamins E and C and β-carotene may not reduce cardiovascular mortality, 86
Women and men have similar outcomes after myocardial infarction, 23
Review literature
Research intelligence for policy and practice: the role of the National Health Service Centre for Reviews and Dissemination (EBM Note), 167
Rhinorrhea
Intranasal ipratropium bromide reduced rhinorrhea and improved cold symptoms, 205
Risk
Down with odds ratios! (EBM Note), 164
On some clinically useful measures of the effects of treatment (EBM Note), 37
Risk factors
Higher diastolic blood pressure but not total cholesterol level increases the risk for fatal stroke, particularly in middle age, 125
Inverse association between alcohol intake and risk for ischemic heart disease depended on the LDL cholesterol level, 189
Men who maintained or improved physical fitness had reduced risk for all-cause and CVD mortality, 26
Review: Modest alcohol consumption lowers risk for coronary heart disease irrespective of the type of drink, 188
Standing and walking for > 5 hours per work day increased the risk for preterm delivery, 28
Stopping smoking decreased the risk for stroke in middle-aged men, 95
Rotaviruses
Immunisation could reduce the cost of rotavirus gastroenteritis, 63
Schools
Pavement stencils marking safe areas promoted safe behaviour at school bus stops, 176
Seizures
Routine intrapartum electronic fetal monitoring decreases neonatal seizures but increases operative deliveries, 93
Self-concept
Service dogs improved the lives of persons with ambulatory disabilities, 181
Sensitivity and specificity
¹⁴C-urea breath test and Giemsa stain were sensitive for detecting Helicobacter pylori, 59
Combur9 urine reagent strips were sensitive and specific in diagnosing viral and bacterial meningitis, 57
Electrocardiography was highly sensitive but only moderately specific in detecting chronic heart failure, 155
Electroencephalography is not useful in the routine evaluation of headache, 56
Noninvasive tests were as accurate as invasive tests for detecting Helicobacter pylori, 58
Pulse oximetry and the WHO algorithm were appropriate for identifying acute lower respiratory tract infection in Peruvian children, 123
Sepsis
Corticosteroids do not reduce mortality in sepsis and septic shock, 74
Serotonin uptake inhibitors
Review: SSRIs are as effective as tricyclics and have fewer side effects, but their cost-effectiveness has not been established, 201
Sex factors
Women and men have similar outcomes after myocardial infarction, 23
Shock, septic
Corticosteroids do not reduce mortality in sepsis and septic shock, 74
Sickle cell
Incentive spirometry decreased pulmonary complications in sickle cell diseases, 76
Signs and symptoms
Clinical assessment plus ultrasonography accurately predicted deep venous thrombosis, 55
Simple support and nicotine replacement improve quit rates for smokers, 91
Smoking cessation
The nicotine patch was a cost-effective adjunct to smoking cessation, 192
Stopping smoking decreased the risk for stroke in middle-aged men, 95
Simple support and nicotine replacement improve quit rates for smokers, 91
Social work
Social services case management did not improve behaviour or quality of life in persons with long-term mental disorders, 30
Somatic symptoms
Cognitive behavioural therapy reduced the frequency and intensity of medically unexplained physical symptoms, 80
Safety
Pavement stencils marking safe areas promoted safe behaviour at school bus stops, 176
Satisfaction
Obstetrician-led shared care was not better than care from general practitioners and community midwives in low-risk pregnant women, 190
Schizophrenia
Family intervention reduces relapse rates, rehospitalisation, and costs and increases compliance with medication in schizophrenia, 121
Tardive dyskinesia was associated with poor treatment response and higher antipsychotic drug dose after the first episode of schizophrenia, 186
