Contents

Purpose and procedure	161	A self help guidebook reduced primary care consultations in irritable bowel syndrome	179
EBM notebook		Review: antibiotic therapy leads to slightly earlier recovery in acute bacterial conjunctivitis	180
Jottings...	162	A single dose of azithromycin was more effective than ciprofloxacin for severe cholera in men in Bangladesh	181
Of studies, syntheses, synopses, summaries, and systems: the "5S" evolution of information services for evidence-based healthcare decisions	162	Review: surgery is more effective than medical treatment for heavy menstrual bleeding but quality of life results are similar	182
Teaching on the run	165	Dental restoration with amalgam was not worse than resin composite material for children's health	183
Evaluating evidence-based practice performance	166		
Evidently...	167		
Therapeutics		Diagnosis	
Review: β blockers differ in their efficacy for preventing major cardiovascular events in younger and older patients	168	The GAD-7 scale was accurate for diagnosing generalised anxiety disorder	184
Aspirin plus dipyridamole was more effective than aspirin alone for preventing vascular events after minor cerebral ischaemia	169	Prognosis	
Clopidogrel plus aspirin was inferior to oral anticoagulation for preventing vascular events in atrial fibrillation	170	1 year mortality after first hospital admission for heart failure was similar in patients with preserved or reduced ejection fraction	185
Review: selective COX 2 inhibitors increase vascular events more than placebo and naproxen but not more than other NSAIDs	171	Clinical prediction guide	
Long term dietary use of potassium enriched salt reduced cardiovascular death in elderly men	172	The San Francisco Syncope Rule was useful for stratifying risk in emergency department patients with syncope	186
Sublingual immunotherapy with a grass allergen tablet improved symptoms and quality of life in allergic rhinoconjunctivitis	173	Differential diagnosis	
2 year inhaled corticosteroid therapy did not prevent asthma in high risk preschool children after treatment was discontinued	174	Chronic cough in children had various aetiologies and common causes of adult cough were found in <10% of children	187
Esomeprazole did not universally improve asthma outcomes in moderate to severe stable asthma	175	Resource review	188, 189
Adjunctive inhaled insulin before meals improved glycaemic control more than adjunctive metformin in type 2 diabetes mellitus	176	Additional articles abstracted in ACP Journal Club	190
Raloxifene and tamoxifen had similar efficacy for preventing invasive breast cancer in women at increased risk	177	Other articles noted	191
Raloxifene produced both harms and benefits in postmenopausal women, with no reduction in cardiovascular disease risk	178	Glossary	Inside back cover
