

Evidence-Based Medicine

Contents

August 2013 Volume 18 No 4

Perspective

- 121** Deciding when to stop: towards evidence-based deprescribing of drugs in older populations

Primer

- 125** The two-step Fagan's nomogram: ad hoc interpretation of a diagnostic test result without calculation

Systematic review

- 129** Tools to assess Evidence-Based Practice behaviour among healthcare professionals

Therapeutics

- 139** Radical prostatectomy does not improve survival compared to observation for localised prostate cancer in a prospective randomised trial
- 140** Double-balloon catheter results in higher rate of vaginal delivery within 24 h when compared with dinoprostone vaginal insert
- 141** Lactobacillus probiotics may prevent recurrent UTIs in postmenopausal women
- 142** Statin-induced lowering of LDL cholesterol associated with a reduced risk for cardiovascular events, not likely outweighed by the risk of diabetes, for people at low short-term risk of cardiovascular disease
- 143** Postpartum bleeding is reduced with sublingual powdered misoprostol when compared with oxytocin injection, but a new formulation of misoprostol is unlikely to revolutionise postpartum haemorrhage care
- 145** Early surgery in infective endocarditis with large vegetations significantly reduced mortality compared with conventional treatment
- 146** Coronary CT angiography decreases the length of stay in emergency department versus standard therapy in patients presenting with acute chest pain, but results in increased downstream testing and radiation exposure
- 147** Randomised trial of exercise dose in children reduces diabetes risk (as measured by insulin resistance) in both 20-min and 40-min doses
- 149** HIV consensus guideline recommends antiretroviral treatment regardless of CD4 count, new regimens and possible regimen change for chronic low level viraemia

Prognosis

- 151** Adequate enteral feeding in the pediatric intensive care unit may be associated with fewer nosocomial infections and deaths
- 152** Disabled children are more likely to be exposed to violence than their non-disabled peers
- 153** Medical warnings reduce older drivers' risk of motor vehicle injury while adversely affecting mental health and physician relationship

Aetiology

- 155** Danish patients with alcoholic cirrhosis have a low risk of hepatocellular carcinoma thus raising questions about the utility of screening
- 156** Breastfeeding is protective against early childhood asthma
- 157** Statins induce hyperglycaemia of uncertain importance
- 158** A small but real risk of cancer in children from undergoing CT
- 159** Vigorous intensity exercise is essentially safe for coronary heart disease patients

Online articles

- e31** One iron pill a day keeps fatigue away?
- e32** Home-like environments for labour and birth: benefits for women and babies
- e33** Meta-analysing randomised controlled trials with omega-3 fatty acids in cardiovascular disease
- e34** N-3 fatty acids did not reduce major cardiovascular events in patients with dysglycaemia
- e35** Lower blood pressure associated with higher mortality in retrospective study of patients with newly diagnosed type 2 diabetes
- e36** Physicians' gut feeling is useful in diagnosing serious infection in children
- e37** Increased incidence of cardiovascular disease: are low-carbohydrate-high-protein diets truly to blame?
- e38** Artificial and sugar-sweetened beverages are associated with increased incidence of hypertension
- e39** Single surgical procedure with general anaesthesia early in life is associated with subsequent impaired language development and cognitive function
- e40** Exposure to diagnostic levels of radiation prior to age 30 increases the risk of breast cancer in BRCA1/2 carriers
