

# Evidence-Based Medicine

## Contents

### Methods

- 41 A novel approach to the determination of clinical decision thresholds

### Systematic review

- 48  An evidence-based approach to an ancient pursuit: systematic review on converting online contact into a first date

### Therapeutics/Prevention

- 57 Discontinuing inhaled steroids might not be safe in severe COPD cases
- 58 Home blood pressure monitoring with patient-initiated drug titration reduces blood pressure in high-risk patients with hypertension
- 59 Evidence is weak to support hepatocellular carcinoma screening in chronic liver disease
- 60 CALORIES trial offers confirmatory evidence that parenteral nutrition does not cause infectious complications in critically ill patients
- 61 Angiotensin receptor-neprilysin inhibitors in heart failure: a shifting paradigm
- 62 Bubble CPAP may be safe and efficacious for neonates in low and middle income countries, but more evidence is needed
- 63 Penicillin is the drug of choice to treat all stages of syphilis despite a paucity of clinical trials data for the treatment of some stages, pregnant women and HIV-infected people
- 64 Tonsillectomy or adenotonsillectomy reduces the number of sore throats in children; however, insufficient information is available on the effectiveness in adults
- 65 Meta-analysis compares anticoagulant strategies in patients with acute myocardial infarction undergoing primary percutaneous coronary intervention
- 66 The evidence for treating acute pyelonephritis with oral antibiotic therapy and short intravenous treatment is growing for low-risk children
- 67 Similar clinical outcomes but more healthcare use in shoulder impingement patients following corticosteroid injection compared with physical therapy

### Prognosis

- 68 Stricter systolic blood pressure control is associated with higher all-cause mortality in patients with chronic kidney disease
- 69 Weight loss  $\geq 10\%$  is required by the severely obese to achieve minimal clinically important differences in health-related quality of life

April 2015 Volume 20 No 2

- 70 Breast feeding and timing of introduction of gluten in infant foods are not predictors of coeliac disease at age 5
- 71 The 'surprise' question may improve the accuracy of GPs in identifying death in patients with advanced stage IV solid-cell cancer

### Aetiology/Harm

- 72 Uncertainty remains about early pregnancy outcomes after treatment for cervical intraepithelial neoplasia
- 73 The administration of pertussis vaccine to pregnant women was associated with a small increased risk of chorioamnionitis, but not an increased risk of hypertensive disorders or preterm birth
- 74 Maternal overweight and obesity in early pregnancy are associated with an increase in infant mortality risk
- 75 Benzodiazepine exposure increases risk of Alzheimer's disease

### Quality improvement

- 76 Transmitting risk effectively in studies is feasible, but insufficient for shared decision-making

### Economic analysis

- 77 Bypass surgery is more cost-effective than percutaneous coronary interventions for most patients with multivessel or left main coronary artery disease
- 78 Lung cancer CT screening is cost-effective but implementation matters

### Letters

- 79  Mixed kinds of evidence: synthesis designs and critical appraisal for systematic mixed studies reviews including qualitative, quantitative and mixed methods studies
- 80 Broadening the evidence base and the mind when thinking about mixed methods research
