

Evidence-Based Medicine

Contents

Editorial

- 151** Treating elevated LDL cholesterol in patients with low short-term risk: Decision making at the limits of EBM

Perspective

- 154** Superiority trials: raising the bar of null hypothesis statistical testing

Original EBM Research

- 156** How does evidence affect clinical decision-making?

Systematic review

- 162** A review of the clinical evidence related to early treatment of elevated LDL for cardiovascular primary prevention

Therapeutics/Prevention

- 170** Restrictive red blood cell transfusion strategies appear safe in most clinical settings
- 171** α -channel and calcium-channel blockers are ineffective as medical expulsive therapy for ureteral stones regardless of size and location
- 172** Personalised chronic care planning shows limited but promising effects on physical and psychological health and self-management capabilities
- 173** In knee osteoarthritis, pharmacological interventions, with the exception of acetaminophen, significantly improve pain; with intra-articular administration being more effective
- 174** An IVC filter and anticoagulation for 3 months is unlikely to show a benefit over anticoagulation alone for high-risk patients with acute pulmonary embolism
- 175** In patients with persistent atrial fibrillation complex ablation techniques were no better than pulmonary vein isolation alone in preventing recurrent atrial fibrillation
- 176** Ezetimibe provides incremental reduction in risk for cardiovascular events and need for revascularisation following an acute coronary syndrome
- 177** A supplementation of DHA and AA to human milk-fed VLBW infants has no significant cognitive improvement or measurable neuroanatomical effects when evaluated at 8 years of age

October 2015 Volume 20 No 5

- 178** Antivirals in combination with corticosteroids compared to corticosteroids alone improve facial recovery in severe Bell's palsy. . . and possibly more?
- 179** The RTS,S/AS01 vaccine continues to show modest protection against malaria in African infants and children
- 180** Directly observed treatment is not the only solution for poor adherence and low cure of tuberculosis
- 181** Percutaneous vertebroplasty does not reduce pain and disability from osteoporotic vertebral compression fracture
- 182** Short-course antimicrobial therapy may be clinically similar to a longer course for complicated intra-abdominal infections
- 183** Blood pressure lowering in patients with type 2 diabetes improves cardiovascular events including mortality, but more intensive lowering to systolic blood pressure less than 130 mm Hg is associated with further reduction in stroke and albuminuria without further reduction in cardiac events
- 184** Immediate delivery in women with non-severe hypertensive disorders at 34–37 weeks' gestation does not reduce maternal complications, and increases neonatal risks more than under expectant management
- 185** Perioperative use of chewing gum affects the inflammatory response and reduces postoperative ileus following major colorectal surgery

Diagnosis

- 187** CT coronary angiography increases diagnostic certainty in patients with stable chest pain

Aetiology/Harm

- 188** NSAIDs increase bleeding risk in patients with atrial fibrillation on antithrombotic therapy
- 189** Combined oral contraceptives and risk of venous thromboembolism: there is higher risk in new generations compared to second generations, but paradoxically not in norgestimate-containing-pills

Letter

- 190** Informed dissent: can we handle internet medicine?
