## Contents

### Editorial

356  Time to treat the climate and nature crisis as one indivisible global health emergency

### EBM analysis

359  Is a one-size-fits-all ‘12-month rule’ appropriate when it comes to the last search date in systematic reviews?

364  Expanding the measurement of overdiagnosis in the context of disease precursors and risk factors

### EBM opinion and debate

369  Living health technology assessments: how close to living reality?

### Original research

372  Detection bias in open-label trials of anticancer drugs: a meta-epidemiological study

383  Re-evaluating the role of pilot trials in informing effect and sample size estimates for full-scale trials: a meta-epidemiological study

392  Piloting a new method to estimate action thresholds in medicine through intuitive weighing

### December 2023 Volume 28 Issue 6

399  Curcumin and proton pump inhibitors for functional dyspepsia: a randomised, double blind controlled trial

### EBM learning

407  Bias, quality and reporting in health research: differences and tools for appraisal

410  Catalogue of bias: novelty bias

### Research methods and reporting

412  Rapid reviews methods series: Guidance on literature search

418  Rapid reviews methods series: Guidance on team considerations, study selection, data extraction and risk of bias assessment

### Patient voices

424  How caring for my child with cancer changed my approach to clinical care and research

### Letter

426  Relationship between the conflicts of interest and the results of meta-analyses of homoeopathy trials
