

Evidence-Based Medicine

Contents

Purpose and Procedure	34	Review: radiotherapy reduces death from and recurrence of breast cancer but increases death from other causes	53
Additional articles abstracted in ACP Journal Club	35	Orlistat with diet was effective and safe for weight loss and coronary risk reduction in obesity	54
EBM notebook		Alendronate increased bone mineral density and decreased vertebral fractures in men with osteoporosis	55
Of studies, syntheses, synopses, and systems: the “4S” evolution of services for finding current best evidence	36	Diagnosis	
Resource corner	39	Review: mydriatic retinal photography is the most effective test for detecting diabetic retinopathy	56
Self management of long term oral anticoagulation was as effective as specialist anticoagulation clinic management	41	The Hopkins Verbal Learning Test had high sensitivity and good specificity for detecting mild dementia in older adults ..	57
Amiodarone maintained sinus rhythm better than sotalol or placebo in atrial fibrillation, but adverse effects were more frequent	42	Prognosis	
Review: various interventions increase smoking cessation rates	43	Post-herpetic neuralgia was not frequent or severe after a first episode of herpes zoster	58
Review: intensive blood pressure control and drugs reduce morbidity and mortality in hypertension and diabetes mellitus	44	Aetiology	
Review: inhaled corticosteroids alone appear to be as effective as oral corticosteroids after emergency department discharge for acute asthma	45	Weekly urge urinary incontinence was associated with increased risk for falls and non-spinal fractures in older women	59
Zinc acetate lozenges reduced the duration and severity of symptoms of the common cold	46	Review: current oral contraceptive use increases the risk for ischaemic stroke	60
Review: prokinetics and histamine-2 receptor antagonists improve symptom scores in non-ulcer dyspepsia	47	Quality improvement	
<i>Helicobacter pylori</i> testing plus eradication was as effective and safe as prompt endoscopy for dyspepsia	48	A nurse led clinic and computer decision support software for anticoagulation decisions were as effective as a hospital clinic	61
Review: antibiotics reduce the duration and severity of travellers’ diarrhoea	49	Clinical prediction guide	
Zinc supplements increased growth more in stunted infants than in non-stunted infants	50	A decision rule with 7 clinical criteria identified patients with minor head injury who did not need computed tomography	62
Review: anticonvulsant drugs relieve chronic but not acute pain	51	Absence of 5 clinical criteria ruled out cervical spine injury in blunt trauma in the emergency department	63
Multilayer bandaging plus compression hosiery was better than hosiery alone for unilateral lymphedema of a limb	52	A simple model based on wound size and duration predicted healing of venous leg ulcers at 24 weeks	64
