

Evidence-Based Medicine

Editors: Brian Haynes & Paul Glasziou

Contents

Purpose and procedure	98	Review: regular medical review is equivalent to written self management plans for optimising asthma control in adults	115
Additional articles abstracted in ACP Journal Club	99	In children with moderate dehydration, oral rehydration reduced ED stay and staff time compared with intravenous rehydration	116
EBM notebook		Gabapentin improved sensory and motor symptoms in the restless legs syndrome	117
How many Cochrane reviews are needed to cover existing evidence on the effects of healthcare interventions	100	Review: most herbal treatments have no benefit for menopausal symptoms	118
Letter		Single dose mifepristone, single dose levonorgestrel, or 2 dose levonorgestrel were effective emergency contraceptives	119
Numbers needed to treat derived from meta-analysis: a word of caution.		Aetiology	
Authors' response:	104	Review: ambulatory blood pressure monitoring predicts clinical outcomes	120
Therapeutics		White matter changes, creatinine, age, and ankle arm index predicted incident MRI defined infarctions in older adults	121
Amlodipine or lisinopril was not better than chlorthalidone in lowering CHD risk in hypertension	105	Review: usual blood pressure is directly related to vascular mortality throughout middle and old age	122
Pravastatin was not better than usual care in reducing all cause mortality or CHD events	106	Quality improvement	
Pravastatin lowered coronary disease risk in elderly persons with or at risk of vascular disease	107	Review: evidence on the effectiveness of interventions to assist patient adherence to prescribed medications is limited	123
Review: PTCA reduces adverse cardiac outcomes and death better than thrombolytics after myocardial infarction	108	Review: patient reminder or recall systems improve immunisation rates	124
Manipulative therapy and a low load exercise regimen each reduced the frequency and intensity of cervicogenic headache	109	Economics	
Tamoxifen reduced breast cancer risk but increased risks of thromboembolic events and all cause mortality in women	110	Screening for abdominal aortic aneurysms was cost effective for prolonging survival from AAA related death in older men	125
Review: antibiotics reduce the rate of clinical failure in children with persistent nasal discharge	111	Collaborative care involving pharmacotherapy was cost effective for increasing anxiety free days in panic disorder	126
Review: continuous positive airway pressure therapy improves subjective and objective sleepiness in obstructive sleep apnoea	112	Review: day hospital is not more effective than inpatient care but is associated with modest cost savings in acute psychiatric disorders	127
A management strategy that controls lower airway eosinophilic inflammation and symptoms reduced exacerbations in asthma	113	Clinical prediction guide	
Review: self management education improves outcomes in children and adolescents with asthma	114	Preliminary clinical criteria had moderate sensitivity but low specificity for detecting osteoporosis in rheumatoid arthritis	128
