

Evidence-Based Medicine

Contents

Purpose and procedure	98	In children with moderate dehydration, oral rehydration reduced ED stay and staff time compared with intravenous rehydration.	116
Additional articles abstracted in ACP Journal Club	99	Gabapentin improved sensory and motor symptoms in the restless legs syndrome	117
EBM notebook		Review: most herbal treatments have no benefit for menopausal symptoms	118
How many Cochrane reviews are needed to cover existing evidence on the effects of healthcare interventions?	100	Single dose mifepristone, single dose levonorgestrel, or 2 dose levonorgestrel were effective emergency contraceptives	119
Letter		Aetiology	
Numbers needed to treat derived from meta-analysis: a word of caution.	104	Review: ambulatory blood pressure monitoring predicts clinical outcomes	120
Authors' response:	104	White matter changes, creatinine, age, and ankle arm index predicted incident MRI defined infarctions in older adults. .	121
Therapeutics		Review: usual blood pressure is directly related to vascular mortality throughout middle and old age	122
Amlodipine or lisinopril was not better than chlorthalidone in lowering CHD risk in hypertension	105	Quality improvement	
Pravastatin was not better than usual care in reducing all cause mortality or CHD events	106	Review: evidence on the effectiveness of interventions to assist patient adherence to prescribed medications is limited	123
Pravastatin lowered coronary disease risk in elderly persons with or at risk of vascular disease	107	Review: patient reminder or recall systems improve immunisation rates	124
Review: PTCA reduces adverse cardiac outcomes and death better than thrombolytics after myocardial infarction.	108	Economics	
Manipulative therapy and a low load exercise regimen each reduced the frequency and intensity of cervicogenic headache.	109	Screening for abdominal aortic aneurysms was cost effective for prolonging survival from AAA related death in older men	125
Tamoxifen reduced breast cancer risk but increased risks of thromboembolic events and all cause mortality in women. .	110	Collaborative care involving pharmacotherapy was cost effective for increasing anxiety free days in panic disorder. .	126
Review: antibiotics reduce the rate of clinical failure in children with persistent nasal discharge	111	Review: day hospital is not more effective than inpatient care but is associated with modest cost savings in acute psychiatric disorders.	127
Review: continuous positive airway pressure therapy improves subjective and objective sleepiness in obstructive sleep apnoea	112	Clinical prediction guide	
A management strategy that controls lower airway eosinophilic inflammation and symptoms reduced exacerbations in asthma	113	Preliminary clinical criteria had moderate sensitivity but low specificity for detecting osteoporosis in rheumatoid arthritis	128
Review: self management education improves outcomes in children and adolescents with asthma.	114	Glossary	Inside back cover
Review: regular medical review is equivalent to written self management plans for optimising asthma control in adults.	115		

The virtual journal Paediatric Asthma, produced by the American Academy of Pediatrics and the BMJ Publishing Group, is now available free of charge to EBM subscribers at www.pediatric-asthma.org
